$ init.defaultBranch main
bash: init.defaultBranch: command not found

@LAPTOP-3QU0S5TD MINGW64 ~
$ git config
usage: git config [<options>]

Config file location
  --global      use global config file
  --system      use system config file
  --local       use repository config file
  --worktree    use per-worktree config file
  -f, --file <file> use given config file
  --blob <blob-id> read config from given blob object

Action
  --get          get value: name [value-pattern]
  --get-all     get all values: key [value-pattern]
  --get-rexep    get values for regexp: name-regexp [value-pattern]
  --get-urlmatch get value specific for the URL: section[.var] URL
  --replace-all replace all matching variables: name value [value-pattern]

n]
  --add          add a new variable: name value
  --unset        remove a variable: name [value-pattern]
  --unset-all   remove all matches: name [value-pattern]
  --rename-section rename section: old-name new-name
  --remove-section remove a section: name
  -l, --list     list all
  --fixed-value  use string equality when comparing values to 'value-pattern'

ern
  -e, --edit     open an editor
  --get-color    find the color configured: slot [default]
  --get-colorbool find the color setting: slot [stdout-is-tty]

Type
  -t, --type <type> value is given this type
  --bool            value is "true" or "false"
  --int             value is decimal number
  --bool-or-int     value is --bool or --int
  --bool-or-str     value is --bool or string
  --path            value is a path (file or directory name)
  --expiry-date     value is an expiry date

Other
  -Z, --null        terminate values with NUL byte
  --name-only       show variable names only
  --includes        respect include directives on lookup
  --show-origin     show origin of config (File, standard input, blob, comma
nd line)
  --show-scope      show scope of config (worktree, local, global, system, c
ommand)
  --default <value> with --get, use default value when missing entry
```
